## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 14-16 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 11-13 and 17 rejected under 35 U.S.C. 103(a) as being unpatentable over Yasukawa (JP 01076755) in view of Forbes et al. (6,483,171) further in view of Sawada (JP 411354394).

Regarding Claims 11-13 and 17, Yasukawa discloses a semiconductor device where PFET arrangement is used in which current flows in a specific direction. Semiconductor substrate <110> is used. Both PFET and NFET current flow in the <110> direction. Yasukawa fails to disclose an NFET structure in which current flows in a <100> direction and the notch pointing in a <001> direction of current flow. However, Forbes et al. disclose a vertical sub-micron CMOS transistors on (110), (111), (311), (511) and higher order surfaces of bulk SOI and thin film structures and method of forming same where in column 3 lines 35-45, NFET with

current flow in <110> direction is disclosed. Furthermore, Sawada discloses a GaAs substrate where a notch pointing in the <001> direction is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required NFET current flow direction and the notch pointing in the required direction in Yasukawa as taught by Forbes et al. and Sawada in order to have a semiconductor device with better controllability.
